

WORKFLOW FOR THE UNIFIED SYSTEM OF SPICED CHILDCARE

This workflow illustrates the Unified Ecosystem to manage the complete operational life cycle of Spiced Childcare management.

The system is designed to improve operational efficiency, reduce manual processes, and create a seamless experience for administrators, educators, and families.

UNIFIED SPICED DAYCARE SYSTEM

1. COMPLETE SYSTEM WORKING TREE

2. HIGH-LEVEL BUSINESS OPERATION FLOW

3. USER INTERACTION ECOSYSTEM

4. FAMILY TO DAYHOME FLOW

5. DAILY OPERATIONS FLOW

6. DOCUMENT COMPLIANCE FLOW

7. BILLING & PAYMENT FLOW

8. REPORTING & GOVERNMENT FLOW

9. COMPLETE SYSTEM RELATIONSHIP MAP

CONCLUSION

The Unified Spiced Childcare Management Ecosystem is designed to become the central operational backbone of the organization. By consolidating administrative operations, childcare workflows, compliance management, financial systems, reporting, and stakeholder communication into a single ecosystem, the platform will:

- Reduce operational complexity
- Improve compliance management
- Enhance communication
- Increase reporting accuracy
- Improve decision-making
- Support organizational growth
- Provide a scalable long-term digital foundation

The platform establishes a future-ready enterprise ecosystem capable of supporting expansion, automation, and evolving childcare operational requirements.

SYSTEM BUDGETING AND COSTING

Item / Portal / Module	Description	Cost (CAD)
Organization Web Portal	Enterprise administrative command center for operational management, staff administration, scheduling oversight, compliance supervision, financial monitoring, reporting orchestration, centralized communication, workflow approvals, audit visibility, and organization-wide system control. Includes advanced dashboards, role-based access control, workflow orchestration, and operational analytics.	3,000
Dayhome & Educator Web Portal	Dedicated operational environment for dayhome owners and educators to manage childcare operations, attendance, room activities, educator schedules, child activity tracking, compliance records, operational calendars, internal communication, documentation, and workflow management. Includes educator operational tools and activity management systems.	2,500
Family & Parent Web Portal	Secure parent-facing platform for child enrollment, attendance visibility, invoice tracking, payment monitoring, messaging, activity updates, child progress visibility, authorized pickups, emergency information management, and communication preferences. Includes family self-service operational workflows.	1,500
Organization Mobile Application	Executive and operational mobile application enabling administrators to monitor operations, approvals, compliance alerts, notifications, attendance summaries, reporting insights, financial status, and real-time operational activities remotely.	1,000
Dayhome & Educator Mobile Application	Mobile operational application supporting educator attendance, child check-in/check-out, activity logging, room management, operational communication, notifications, schedule visibility, and dayhome operational workflows in real-time.	1,200
Family & Parent Mobile Application	Parent mobile application for attendance visibility, child activity updates, messaging, invoices, notifications, emergency communication, and daily childcare engagement workflows. Includes real-time notifications and family interaction tools.	800
Scheduling & Attendance Engine	Centralized scheduling and attendance processing engine responsible for educator scheduling, child scheduling, room allocation, attendance processing, ratio monitoring, operational calendar synchronization, and automated operational validations across the ecosystem.	900

Billing & Financial Processing Engine	Financial operations engine handling invoice generation, subsidy calculations, payment tracking, balance management, financial reporting, transaction history, and operational financial workflows. Designed for scalable financial processing and reporting accuracy.	800
Reporting & Analytics Engine	Enterprise reporting infrastructure supporting operational reporting, attendance reports, compliance reporting, financial analytics, exportable reports, dashboard metrics, and business intelligence visibility across the platform.	600
Compliance & Document Management Engine	Compliance lifecycle management system for secure document uploads, expiry tracking, automated renewal reminders, compliance monitoring, audit support, and operational compliance visibility across dayhomes and educators.	500
Messaging & Notification Infrastructure	Centralized communication engine supporting system-wide announcements, operational messaging, automated notifications, activity updates, reminder systems, and communication workflows. SMS delivery charges and third-party messaging service costs are billed separately based on usage.	300
API & System Integration Layer	Secure API infrastructure enabling synchronization between web applications, mobile applications, authentication services, reporting systems, notification services, and future third-party integrations. Includes scalable backend communication architecture.	200
Security, Authentication & Access Control	Enterprise-grade authentication infrastructure including secure login systems, role-based access management, permission hierarchy, audit logging, session management, account security controls, and operational access governance.	20
VPS Deployment, DevOps & Infrastructure Setup	Production VPS deployment, environment configuration, SSL setup, monitoring configuration, CI/CD preparation, production optimization, server hardening, database deployment, backup configuration, uptime monitoring, logging systems, and production environment stabilization.	1,500

TOTAL DEVELOPMENT COST (WITHOUT DEPLOYMENT): CAD\$ 13,500

TOTAL PROJECT COST (INCLUDING DEPLOYMENT) CAD\$ 15,000

PROJECT TIMELINE : 4 – 6 MONTHS

The project includes 3 months of post-deployment technical support covering:

- Bug fixes
- System stabilization
- Minor adjustments
- Performance monitoring
- Deployment support
- Technical guidance
